

Abstract

1. Display Advertising project
2. Reddit project
3. SLT TA work

Description

1. **Display Advertising project**

I had a meeting with Abbas.

I finished the work on unifying OutBrain dataset into one table. It's currently running and I expect it to run for about a week. I shared some ideas and questions about future of my thesis project with Abbas. I think we will discuss about them in the next meeting and hopefully make a clearer vision about future of it.

2. **Reddit project**

Since I don't get response from Hamid about this project, I'm considering it has no priority for the lab. So I focus on my thesis and let Sadegh work on his exams and also his internship. We may continue this project when it got it's priority again.

3. **SLT TA work**

I worked on writing solution for the questions of the exam. I haven't yet finished solving them.

Next Week

• **Display Advertising project**

Work on data code for the other datasets.

Try working on the final model code and a comparison between all competitor models.

• **SLT TA**

Finish the solutions for the exam.

Take a look at the questions and give feedback to Head TA.
