

Abstract

1. Reddit project (Testing proportion scenarios - Finish data gathering - Think about Boosting idea)
2. Display Advertising project (Edit and rewrite thesis)
3. Stochastic Processes TA (HW4 and solution - Read about ancillary statistics)

Description

1. **Reddit project (Testing proportion scenarios - Finish data gathering - Think about Boosting idea)**

We tested some of proportion scenarios. It seems Erfan was right about logarithmic growth. More tests is on Sadegh's schedule.

We finished our data gathering stage. We will provide more stats about the gathered data.

I worked about boosting idea.

2. **Display Advertising project (Edit and rewrite thesis)**

I read many papers briefly and worked on the second chapter of my thesis. It's not finished yet. (Need for more work on datasets section)

3. **Stochastic Processes TA (HW4 and solution - Read about ancillary statistics)**

I read the Casella and Berger book chapter 6 again and i modified HW4. I also provided solution for all questions. I had problem defining quizzes but it won't take long i finish them too.

Next Week

- Reddit project (Meeting with Kevin, Sina and Hamid - More testing on proportion scenarios - Checking the gathered data for Location and Age - Think about Boosting idea (Read boosting formulations) - Start reading about GCN and ICA and etc.)
- Display Advertising project (Meeting with Pegah Co.? - Write datasets chapter of my thesis)
- SP course TA work (Quizzes and their solutions)
